#6. Summary

- Summarization and github url

Challenge

How can Liner further differentiate itself from competitors and increase its market penetration among students and researchers?

Tactic1. Introducing new capabilities

Liner Mission

"Helping people become smarter faster"

Liner Vision

**"Quickly delivering reliable information
through recommendations"**

10 Pain Points

1. Difficulty of expressing mathematical symbols

2. Lack of automatic word count functionality

3. Absence of utilizing information on YouTube

4. Absence of a feature to export generated content as PDFs or to GoodNotes

5. Inconsistency in the response language when using multiple languages

6. Inability to adjust response depth based on education level

7. Lack of creativity in generated content

8. Lack of functionality to retrieve sources from subscribed websites

9. Absence of a feature to refine essays based on field-specific characteristics and considerations

10. Inability to directly generate images or tables

Developing Feature Ideas

Pain Points	Features
1. Difficulty of expressing mathematical symbols	Display a mathematical keyboard window to make symbol input more accessible
3. Absence of utilizing information on YouTube	Provide YouTube videos along with the specific sourced part referenced in the content
4. Absence of a feature to export generated content as PDFs or to GoodNotes	Add options to export generated content directly as PDFs or to GoodNotes
6.Inability to adjust response depth based on education level	Include an adjustable scale (1–5) to customize the depth of responses based on user's choice
7.Lack of creativity in generated content	Provide responses from various viewpoints and include constructive feedback to enhance creativity

Survey on Developed Features

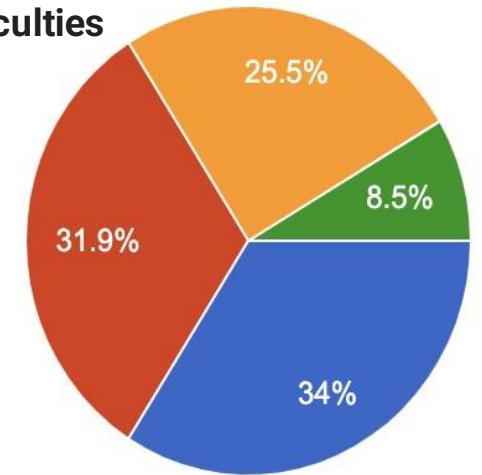

We conducted a survey to gather insights on any challenges or discomforts experienced while using generative AI platforms such as ChatGPT, Claude, and Perplexity, and 47 people completed.

"I have encountered a lack of creativity in AI-generated content."

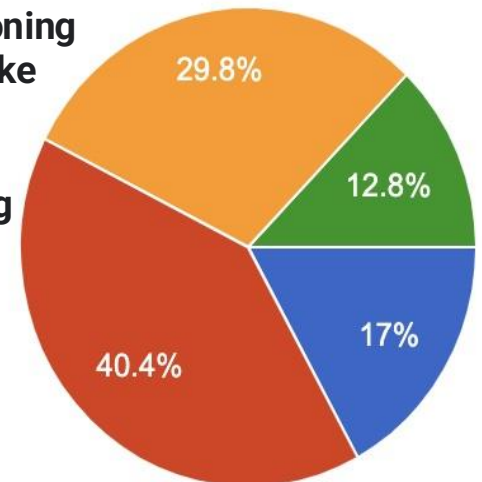

"I have experienced difficulties using mathematical functions or special symbols when asking questions to generative AI tools."

"I have experienced situations where GenAI provided answers that did not align with my education level."

"I have wanted to extract content or answers generated by GenAI into a file, such as a PDF or GoodNotes."

"I have experience transitioning to video-based platforms like YouTube for a more comprehensive and user-friendly understanding even after receiving AI-generated content/ answers."

Strongly Agree

Agree

Neutral

Disagree

Strongly disagree

Process of narrowing down to one feature (1/2)

1 Compared to other features, it was the only one to receive a rating of 'strongly disagree.'

2 Similar to Liner's Fine-Tune Answers feature.

Process of narrowing down to one feature (2/2)

- **The one pain point : 7. Lack of creativity in generated content**
- **The one feature : Provide responses from various viewpoints and include constructive feedback to enhance creativity**
- **The reason for choosing this feature among the remaining features in the survey:**
 - **Information diversity:** Users can access a variety of sources due to the inclusion of diverse perspectives and constructive feedback.
 - **Information reliability:** By providing multiple pieces of information rather than just one, it addresses reliability issues that may arise from a user relying on a single incorrect source.
 - **Company's direction:** Liner's goal is "Helping people become smarter faster." The ability to access rich and diverse information contributes directly to making people smarter.

“Liner Agent”

Think Wider, Write Stronger

“Your Agent” enhances your writing by broadening perspectives, offering opposing viewpoints, and providing constructive feedback on your essays

“Liner Agent”

Think Wider, Write Stronger

1

Linking information to the user's original sentence rather than the one revised by Liner

By directly linking the sentences in the user's essay to the source, it eliminates the need to compare Liner's revised sentences with the user's original ones.

2

Providing various viewpoints and constructive feedback to enhance creativity

By providing various viewpoints and constructive feedback, students can broaden their perspectives, refine their ideas, and strengthen their arguments, fostering creative thinking and improving the overall quality of their work.

#4. One Feature : Liner Agent

Current problem of Liner

Liner

Global warming is one of the most pressing challenges of our time, driven largely by carbon emissions...

Solve in steps ▾ | Liner Basic

Acceleration of Global Warming Due to Carbon Emissions

Global warming is a critical environmental issue that is substantially driven by carbon emissions resulting from human activities. The combustion of fossil fuels, specifically coal, oil, and natural gas, has led to a significant rise in greenhouse gas concentrations in the atmosphere, thereby exacerbating the natural greenhouse effect. Consequently, global temperatures have risen, which has initiated a series of catastrophic consequences including the melting of ice caps, rising sea levels, and an increase in the frequency and severity of extreme weather events such as hurricanes and heatwaves ¹.

Primary Sources of Carbon Emissions

The primary contributors to carbon emissions are energy production, transportation, industrial processes, and agriculture. The reliance on fossil fuels for electricity generation, heating, and transportation stands out as a major source of emissions. Furthermore, activities such as deforestation and livestock farming have been linked to heightened carbon emissions, as they contribute notably to both direct carbon release and the reduction of carbon sinks in the ecosystem ⁴. The multifactorial nature of these emissions underlines the complexity of the challenge at hand.

Strategies for Reducing Carbon Emissions

To combat the escalating levels of carbon emissions, a comprehensive shift toward renewable energy sources is essential. This includes increasing the efficiency of energy use and promoting sustainable

When a user inputs their essay into Liner, it returns detailed explanations and insights from the user's original essay while citing sources for its explanations.

However, Liner's generated essay does not align precisely with the order of the user's essay sentences, resulting in additional time and effort for comparison.

What Liner Agent can Help you

Acceleration of Global Warming Due to Carbon Emissions

Global warming is one of the most pressing challenges of our time, driven largely by carbon emissions from human activities. The burning of fossil fuels, such as coal, oil, and natural gas, has significantly increased greenhouse gas concentrations in the atmosphere, intensifying the natural greenhouse effect. This has caused global temperatures to rise, leading to melting ice caps, rising sea levels, and more frequent extreme weather events like hurricanes and heatwaves. Ecosystems and human societies are already feeling the impacts of these changes.

Energy production, transportation, industrial processes, and agriculture are the primary sources of carbon emissions.³ Fossil fuel reliance for electricity, heating, and transportation is a major contributor, while deforestation and livestock farming also exacerbate the issue. Addressing these emissions requires a shift to renewable energy sources, improved energy efficiency, and widespread adoption of sustainable practices. On a global scale, agreements like the Paris Climate Accord emphasize the importance of international collaboration to curb emissions.

While the challenges are immense, solutions are within reach.

Transitioning to renewable energy, reducing consumption, and supporting green technologies can mitigate the worst effects of global warming.² The climate crisis demands urgent and collective action, as the future of the planet and its inhabitants depends on the choices made today.⁴

Depth Interviews with Five Students

Student 1

"Providing diverse perspectives when recommending papers or information can be highly beneficial for writing academic reports. Particularly, including opposing viewpoints can help create a more balanced and well-rounded argument."

Student 2

"Technically, implementing such a feature seems feasible with current search engine algorithms. The technology to extract and match relevant content from academic papers already exists, and algorithms that link related search queries can be leveraged."

Student 3

"It can enhance students' critical thinking skills. Since they cannot search for what they don't know, directly recommending relevant information will make their learning experience more comprehensive."

Student 4

"There is a risk of overwhelming users with excessive information, forcing them to filter out relevant points. This may lead to losing the original direction of the essay, feeling inundated by criticism, or even having their initial ideas shaken."

Student 5

"The complex and nuanced language often used in academic papers might lead to difficulties in correctly identifying opposing perspectives or could result in misinterpretations. To address this, advanced natural language processing techniques would be required to accurately discern the key arguments of a paper and match them appropriately."

Solutions to students' concerns

Student4 → To avoid overwhelming user with excessive information, we should make giving extra information as an option with a filter function.

Student 5 → The technical aspects were tested directly 'LLM → DistilBERT-based Sentence Transformers', and it was confirmed that the following features make this possible.

Implementation1: Sentence Matching

User Essay

Acceleration of Global Warming Due to Carbon Emissions

Global warming is one of the most pressing challenges of our time, driven largely by carbon emissions from human activities. The burning of fossil fuels, such as coal, oil, and natural gas, has significantly increased greenhouse gas concentrations in the atmosphere, intensifying the natural greenhouse effect. This has caused global temperatures to rise, leading to melting ice caps, rising sea levels, and more frequent extreme weather events like hurricanes and heatwaves. Ecosystems and human societies are already feeling the impacts of these changes.

Energy production, transportation, industrial processes, and agriculture are the primary sources of carbon emissions. Fossil fuel reliance for electricity, heating, and transportation is a major contributor, while deforestation and livestock farming also exacerbate the issue. Addressing these emissions requires a shift to renewable energy sources, improved energy efficiency, and widespread adoption of sustainable practices. On a global scale, agreements like the Paris Climate Accord emphasize the importance of international collaboration to curb emissions.

While the challenges are immense, solutions are within reach. Transitioning to renewable energy, reducing consumption, and supporting green technologies can mitigate the worst effects of global warming. The climate crisis demands urgent and collective action, as the future of the planet and its inhabitants depends on the choices made today.

Acceleration of Global Warming Due to Carbon Emissions

Global warming is a critical environmental issue that is substantially driven by carbon emissions resulting from human activities. The combustion of fossil fuels, specifically coal, oil, and natural gas, has led to a significant rise in greenhouse gas concentrations in the atmosphere, thereby exacerbating the natural greenhouse effect. Consequently, global temperatures have risen, which has initiated a series of catastrophic consequences including the melting of ice caps, rising sea levels, and an increase in the frequency and severity of extreme weather events such as hurricanes and heatwaves.

Primary Sources of Carbon Emissions

The primary contributors to carbon emissions are energy production, transportation, industrial processes, and agriculture. The reliance on fossil fuels for electricity generation, heating, and transportation stands out as a major source of emissions. Furthermore, activities such as deforestation and livestock farming have been linked to heightened carbon emissions, as they contribute notably to both direct carbon release and the reduction of carbon sinks in the ecosystem. The multifactorial nature of these emissions underlines the complexity of the challenge at hand.

Strategies for Reducing Carbon Emissions

To combat the escalating levels of carbon emissions, a comprehensive shift toward renewable energy sources is essential. This includes increasing the efficiency of energy use and promoting sustainable agricultural and industrial practices. The global community recognizes the need for coordinated efforts; international frameworks such as the Paris Climate Accord serve to highlight the importance of collective action and collaboration among nations in the fight against climate change.

(1/2)

Urgency of Action

Despite the enormity of the challenges posed by global warming, feasible solutions are attainable. Transitioning from fossil fuels to renewable energy sources, reducing overall consumption, and fostering the development and implementation of green technologies are pivotal strategies to mitigate the adverse impacts of global warming. Each country and community has a role to play, and immediate action is crucial to slow down the advancing climate crisis. The choices made today will directly influence the health of our planet and the well-being of future generations.

Conclusion

The ramifications of carbon emissions, coupled with global warming, are immediate and severe, underlining the pressing need for action. The interconnection of energy production, transportation, and agricultural practices with climate stability indicates that broad-sweeping changes are necessary. As the climate crisis escalates, urgency in transitioning to sustainable practices and renewable energy remains paramount to ensure a livable future for all.

Used Metrics and Models

- The Characteristics of Comparative Sentences

"Not all words match exactly, but they are semantically similar."

한

Cosine Similarity	Jaccard Similarity	Euclidean Distance	Edit Distance
Highly Suitable. It works with embedding vectors to capture the semantic meaning of sentences rather than relying on exact word matches.	Not Suitable. Jaccard Similarity calculates the ratio of the intersection to the union of word sets, requiring exact word matches to score high.	Moderately Suitable. Shorter distances indicate closer vectors, but it's less interpretable than Cosine Similarity, especially without normalization.	Not Suitable. Edit Distance measures the number of operations (insertions, deletions, substitutions) required to transform one string into another. It is more suited for exact string matching or similarity in word sequences.

Comparing various 'Model' based on Cosine Similarity

Method: Sentence matching between 'a simple essay on global warming caused by carbon emissions' and 'the text revised by Liner'.

SBERT(all-MiniLM-L6-v2)	BM25	DistilBERT-based Sentence Transformers (distilbert-base-nli-stsb-mean-tokens)
It has the longest execution time but matches sentences closer to the correct answer than BM25.	It has the shortest execution time but assigns low similarity scores to sentences with weak relevance.	The execution time is shorter than SBERT. It shows results similar to the SBERT model.

Therefore, we determined that 'the DistilBERT-based Sentence Transformers model (distilbert-base-nli-stsb-mean-tokens)', which is based on 'Cosine Similarity', performs the best in sentence matching.

Implementation2: ChatGPT API and LLMs

Utilize OpenAI's API or other LLMs to analyze our essay, generating additional viewpoints and constructive feedback. Then, **Liner** provides **related papers along with the corresponding sources**.

From the LLM-generated answers using task-specific prompts, **Linear Search Engine** identifies matching papers.

What does it mean to make people **smarter**?

- Liner defines making people smarter as providing accurate information through recommendations.
- YKnow believes that, in addition to this, it is essential to offer people **diverse perspectives**.
- People can write incorrect content because they are not completely intelligent or always right. If Liner only provides related materials, it risks leading them down the wrong path or limited learning. However, by **providing various viewpoints and constructive feedback**, people can not only **recognize their shortcomings** but also **broaden their perspectives, refine their ideas, and strengthen their arguments, fostering creative thinking and improving the overall quality of their work**.

**** [github url](#) for codes, data, and details****
